

Croix-Rouge Française

www.croix-rouge.fr

The French Red Cross is the national Red Cross Society in France, founded in 1864. It has more than 62,000 volunteers, 17,000 employees, 1,062 local offices, 108 departmental and territorial delegations and 634 social, medico-social and health establishments.

Challenges

- Google Workspace user lifecycle management, including data retention for deleted users and shared drives
- The need for a fast recovery of large amounts of data in case of a disaster / outage
- Data governance for 7,000 users and compliance with regional data residency and data protection requirements
- Automation of Google Workspace data management and reporting
- Secure access to backup data for distributed IT team and end-user self-service recovery

Results

“

Afi provided an easy-to-use and scalable platform to protect 90 terabytes of data with little effort from our IT team. ”

- Yves Couturier, Director IT

Efficient archival service

Croix-Rouge Française leveraged unique Afi distributed backup service capabilities to archive 60,000 users, complying with GDPR and other data residency regulations

IT administrator roles and end-user self service

Afi enabled creation of custom admin roles for the support and local IT admin teams, limiting their access to users in their respective areas of responsibility. As well as granular access to backup data for legal and HR teams for audit.

Granular data retention and archiving policies

Croix-Rouge Française configured Afi to retain emails and shared files from deleted users for 3 years from the date of the deletion, therefore easily complying with their data archiving requirements
